

2014 Video Review - Yellow Lake

2014 I-LIDS Report for Yellow Lakes and Rivers Association

The I-LIDS were installed at Jeffries, Lodge, and Ike Walton on May 2, 2014 and removed on 11/6/14. We reviewed twice the number of videos that we did in 2013.

Yellow Lake Lodge- Changed camera on 8/3 so that audio message would play for boaters. This clearly made a difference as there was 1 inspection documented before this, but 18 inspections noted after audio installed. (Of course not all inspections will be seen on camera).

Configuration changes for the model camera required us to reduce the size and increase compression of the videos which resulted in an increase of the number of videos being captured, which is reflected in the graphs. While we captured more activity, the images were smaller. We reported 3 suspect AIS violations and forwarded 6 other videos to the county for review. In order to provide clearer evidence, we would plan to utilize an Axis camera that has an SD storage card for local caching of images. This will allow us to capture HD images which will be more actionable. While these models currently do not support I/O, development of a new controller module will allow us to use both the HD camera and implement an audio message.

Jeffries Launch- This camera uses an SD card with a higher resolution lens and so the audio module was not supported. Recommendation to implement audio with the new controller board when available.

Ike Walton- While this launch was not as active, there were some intermittent issues with electrical service which were hard to diagnose. We replaced the timer in the utility box which appeared to not be always functioning. So the activity at this site is less than actually occurred, but by looking at the graphs the camera did function throughout the season. We would want to replace the ethernet connector and have the outlet serviced as a first step next season. Trim weeds that interfere w/ launch views and cause false positives. Moving the location of this unit to the east side of the road would provide better images and provide solar power. This would also require the use of a 4G modem which is more expensive. Next season the video reviewer will be contacting a local support person to alert them to the need to clear moving weeds from the camera.

The videos can be reviewed at: <http://environmentalsentry.us/lakemonitor/authmain.php>
